CAREER OBJECTIVE

Fresh graduate in Informatics with a strong interest in DevOps Engineering, Cloud Infrastructure, Linux Systems, and Site Reliability Engineering. Hands-on experience with Linux, Docker, Kubernetes, ArgoCD, Prometheus, Grafana, CI/CD Jenkins, and infrastructure provisioning using Terraform. Experienced in building and deploying containerized applications, implementing CI/CD and GitOps workflows, managing Kubernetes workloads, provisioning infrastructure, and setting up observability for applications and infrastructure. Seeking to contribute to automation, cloud infrastructure, and reliable software delivery while continuously improving development and operations workflows.

EDUCATION

Universitas Pembangunan Nasional “Veteran” Yogyakarta | Sleman, DI Yogyakarta

Program Sarjana Informatika | GPA: 3.74/4.0

2022 - 2026

SKILLS

Programming: Go, SQL, Bash, Groovy

Cloud & Infrastructure: Linux, Docker, Kubernetes, Helm, Terraform, GCP, AWS, VPC

CI/CD & GitOps: Jenkins, ArgoCD, Cloud Build, GitHub

Monitoring & Observability: Prometheus, Grafana, Node Exporter, Redis Exporter

Databases & Tools: MySQL, Redis, MinIO, Git, Swagger/OpenAPI, Postman, Trivy

Soft Skills: Problem Solving, Teamwork, Adaptability, Fast Learning

WORK EXPERIENCE

Backend Developer Intern

Oct 2025 - Dec 2025

Dinas Komunikasi, Informatika dan Persandian Kota Yogyakarta

- Developed backend REST APIs using Go (Fiber) for authentication, event management, ticketing, and transaction features.
- Modeled system architecture and business processes using Use Case Diagrams, DFDs, Flowcharts, and Swimlane Diagrams.
- Designed relational databases and implemented data models using GORM and MySQL.
- Collaborated within an Agile development team throughout multiple development sprints.

ORGANIZATIONS

Research and Development Division Member, Linux Study Group (KSL)

2024 - 2025

- Practiced Linux system administration and cybersecurity through hands-on labs, including CTF challenges, bug hunting, file analysis, and low-level data inspection.

PROJECTS

Helpdesk Ticketing API | Personal Project

June 2026

- Containerized the application and supporting services using Docker Compose for consistent deployment.
- Deployed the application to Kubernetes using ArgoCD with a GitOps-based deployment workflow.
- Integrated MySQL, Redis, and MinIO for persistent storage, caching, and object storage.
- Implemented health checks, readiness probes, and Prometheus metrics for application observability.
- Built a monitoring stack using Prometheus, Grafana, Node Exporter, and Redis Exporter.
- Generated interactive API documentation using Swagger/OpenAPI for testing and integration.
- Source Code : [Helpdesk-Ticketing-API\(Github\)](#) , [GitOps](#)

Tickeria | Deployment Project

Sep 2026

- Deployed the application on Kubernetes using Kind with ArgoCD following GitOps principles.
- Managed Kubernetes configurations declaratively through a dedicated GitHub repository.
- Configured deployments and services for the frontend, backend, and MySQL database.
- Implemented persistent storage using Kubernetes PersistentVolumes and PVC and HPA for auto scaling
- Applied NetworkPolicies to control communication between application workloads

- Source Code : [backend](#) , [frontend](#) , [gitops](#)

LANGUAGE

- Bahasa Indonesia
- English | [toefl](#) : 523

CERTIFICATIONS

- Cisco - Linux Essentials - 2026 [Credential](#)
- Cisco - Cyber Threat Management - 2026 [Credential](#)
- Udemy - Kubernetes Certified Application Developer (CKAD) with Tests - 2026 [Credential](#)
- Online Course Certificate: Jenkins: Pemula sampai Mahir - 2026 [Credential](#)
- Pemrograman Golang: Pemula sampai Mahir - 2026 [Credential](#)
