CAREER OBJECTIVE

Fresh graduate in Informatics with a strong interest in Site Reliability Engineering, Linux Systems, Cloud Infrastructure, and DevOps Engineering. Hands-on experience with Linux, Docker, Kubernetes, Prometheus, Grafana, CI/CD, and infrastructure provisioning using Terraform. Experienced in building and monitoring containerized applications, implementing health checks and observability, and troubleshooting application and infrastructure issues. Eager to contribute to reliable system operations, real-time monitoring, incident troubleshooting, and continuous infrastructure improvement.

EDUCATION

Universitas Pembangunan Nasional “Veteran” Yogyakarta | Sleman, DI Yogyakarta

Program Sarjana Informatika | GPA: 3.74/4.0

2022 - 2026

SKILLS

Programming Languages: Go, SQL, Bash

Infrastructure & Cloud: Linux, Docker, Helm, Kubernetes, Terraform, Google Cloud Platform (GCP), AWS, VPC

CI/CD & Monitoring: Jenkins, Cloud Build, Prometheus, Grafana

Databases & Tools: MySQL, Redis, MinIO, Git, GitHub, Swagger/OpenAPI, Postman, Trivy

Soft Skills: Problem Solving, Teamwork, Adaptability, Fast Learning

WORK EXPERIENCE

Backend Developer Intern

Oct 2025 - Dec 2025

Dinas Komunikasi, Informatika dan Persandian Kota Yogyakarta

- Developed backend REST APIs using Go (Fiber) for authentication, event management, ticketing, and transaction features.
- Modeled system architecture and business processes using Use Case Diagrams, DFDs, Flowcharts, and Swimlane Diagrams.
- Designed relational databases and implemented data models using GORM and MySQL.
- Collaborated within an Agile development team throughout multiple development sprints.
- Source Code : [backend](#) , [frontend](#)

ORGANIZATIONS

Research and Development Division Member, Linux Study Group (KSL)

2024 - 2025

PROJECTS

Web-Based Task Assignment Approval System | AssignGO

June 2025

- Developed and maintained 2 REST APIs using Node.js for task assignment workflows.
- Provisioned Google Cloud infrastructure using Terraform, including networking and managed database resources.
- Implemented CI/CD pipelines using Cloud Build to automate build, testing, and deployment processes.
- Integrated MySQL and PostgreSQL databases for transactional and operational data management.
- Collaborated with a team of 4 developers using Git-based workflows.
- Source Code : [backend1](#) , [backend2](#) , [frontEnd](#)

Helpdesk Ticketing API | Personal Project

June 2026

- Developed a RESTful Helpdesk Ticketing System using Go and Fiber following Clean Architecture principles.
- Integrated MySQL, Redis, and MinIO to provide persistent storage, caching, and object storage services.
- Exposed health check, readiness probe, and Prometheus metrics endpoints to improve service observability.
- Built a monitoring stack using Prometheus and Grafana to monitor application health and infrastructure metrics.
- Integrated 3 data services (MySQL, Redis, and MinIO) and 4 monitoring components (Prometheus, Grafana, Node Exporter, and Redis Exporter) into a containerized application environment using Docker Compose..

- Generated interactive API documentation using Swagger/OpenAPI to simplify API testing and integration.
- Source Code : [Helpdesk-Ticketing-API\(Github\)](#)

Zero Touch Provisioning for Multi-Vendor Networks | Final Project

May 2026

- Designed and implemented a Zero Touch Provisioning (ZTP) system for multi-vendor network environments.
- Automated device provisioning using DHCP Vendor Class Identifier (VCI) and ISC-DHCP-Service.
- Developed provisioning templates for AristaEOS, Cumulus Linux, EXOS switch devices.
- Built a complete simulation environment using GNS3 to validate end-to-end provisioning workflows.
- Reduced manual network device configuration through automated provisioning.

LANGUAGE

- Bahasa Indonesia
- English | [toefl](#) : 523

CERTIFICATIONS
